

Home schooling suggestions

The following are a list of suggestions for parents that can help their child continue on their learning paths and continue to grow and develop cognitively.

1. Read READ READ

(Doesn't matter what age-do it yourself and lead by example)

2. Create a schedule and discuss rules, routines and

consequences (teachers spend the first month of school on this so this ones important and age doesn't matter)

3. Follow your schedule and routines created

(sounds repetitive but you must stick to it otherwise it's a free for all be flexible in the time but not in the structure i.e. if waking an hour later then just follow the schedule adjusting the hours)

4. Find optional resources based on your child's

interest (likes animals? Take a virtual tour of a zoo. History? Tour the Smithsonian virtually. Look up different professions, find famous leaders and facts on them the internet is full of free educational resources right now so take advantage)

5. Baking and Games

many card games involve mathematical skills (make 21, war is comparing numbers greater and less than) baking in itself is full of math and problem solving, it's also a way to connect together.
